

## 2016-02 L-Band Downconverter

The 2016-02 Downconverter converts 950 to 2150 MHz to 70 MHz in 1 MHz steps with low group delay and flat frequency response. Synthesized local oscillators (LO) provide frequency selection. Multi-function push button switches select the input frequency, gain, and other parameters. Front panel LEDs provide indication of DC power, PLL alarm or Remote operation. Gain is adjustable manually (MGC) over a 0 to 50 dB range. The frequency and gain are remotely selectable. Parameter selection and frequency and gain settings appear on the LCD display. Connectors are Type F female for the RF, and BNC female for the IF and optional external 10 MHz reference input and output (option -E). Table 2.2 shows other connector options. LNB +24 VDC (option -L) and 10 MHz reference (option -E) can be inserted on the RF lines. The 2016-02 is powered by a 100-240  $\pm$ 10% VAC, 47-63 Hz power supply, and is contained in a 1 3/4" X 19" X 16" rack mount chassis.
