2016-7984-720-400 Downconverter, 7.9 - 8.4 GHz to 720 ±200 MHz

The 2016-7984-720-400 Downconverter converts 7.9 to 8.4 GHz to 720 ±200 MHz in 125 kHz steps, Fc = 8.1-8.25 GHz (1 kHz steps, option X1006) with low group delay and flat frequency response. Synthesized local oscillators (LO) provide low phase noise and ±0.01 ppm stability frequency selection. Multi-function push button switches select the RF frequency, gain, and other parameters. Front panel LEDs provide indication of DC power (green), PLL alarm (red), and remote operation (yellow). Gain is adjustable manually over a +30 to +50 dB range as adjusted by the front panel multi-function push-button switches. Remote operation allows selection of frequency and gain. Parameter selection and frequency and gain settings appear on the LCD display. Connectors are BNC (female) for 10 MHz reference input and output, and Type N (female) for the RF input. External 10 MHz is standard. A 10 MHz output connector contains either the internal or external 10 MHz reference signal. It is powered by a 100-240 ±10% VAC power supply, and in a 1 3/4" X 19" X 16" rack mount chassis.
