Data, drawings, and other material contained herein are proprietary to Cross Technologies, Inc., but may be reproduced or duplicated without the prior permission of Cross Technologies, Inc. for purposes of operating the equipment.

When ordering parts from Cross Technologies, Inc., be sure to include the equipment model number, equipment serial number, and a description of the part.
WARRANTY - The following warranty applies to all Cross Technologies, Inc. products.

All Cross Technologies, Inc. products are warranted against defective materials and workmanship for a period of one year after shipment to customer. Cross Technologies, Inc.’s obligation under this warranty is limited to repairing or, at Cross Technologies, Inc.’s option, replacing parts, subassemblies, or entire assemblies. Cross Technologies, Inc. shall not be liable for any special, indirect, or consequential damages. This warranty does not cover parts or equipment which have been subject to misuse, negligence, or accident by the customer during use. All shipping costs for warranty repairs will be prepaid by the customer. There are not other warranties, express or implied, except as stated herein.
1.0 General

1.1 Equipment Description
The 2016-1327 Downconverter converts 1300 to 2700 MHz to 70 MHz in 1 MHz steps with low group delay and flat frequency response. Synthesized local oscillators (LO) provide frequency selection. Multi-function switches select the input frequency, gain, and other parameters. Front panel LEDs provide indication of DC power, PLL alarm or Remote operation. Gain is adjustable manually (MGC) over a 0 to 30 dB range. The frequency and gain are remotely selectable. Parameter selection and frequency and gain settings appear on the LCD display. Connectors are BNC female for the RF, IF and optional external 10 MHz reference input and output (option -E). Tables below show connector and other options. The 2016-1327 is powered by a 100-240 ±10% VAC, 47-63 Hz power supply, and is contained in a 1 3/4” X 19” X 16” rack mount chassis.

FIGURE 1.2  Model 2016-1327 Downconverter Block Diagram
1.2 Technical Characteristics

TABLE 1.0  2016-1327  Downconverter Specifications*

**Input Characteristics**
- Impedance/Return Loss: 50Ω/10 dB (see TABLE 2.2 for connector options)
- Frequency: 1300 to 2700 MHz
- Noise Figure, Max.: 15 dB max. gain
- Input Level range: -50 to -20 dBm
- Input 1 dB compression: -15 dBm

**Output Characteristics**
- Impedance/Return Loss: 75 Ω/18 dB (see TABLE 2.2 for connector options)
- Frequency: 70 ± 18 MHz
- Output Level/max. linear: -20 / -10 dBm
- Output 1 dB compression: -5 dBm

**Channel Characteristics**
- Gain Range (adjustable): 0.0 to +30.0 dB (1 dB steps)
- Image Rejection: > 50 dB, min.
- Frequency Response: ±2.0 dB, 1300 to 2700 MHz ; ± 0.75 dB, 36 MHz BW
- Spurious Response: < -50 dBc, in band
- Group Delay, max.: 0.015 ns/MHz2 parabolic; 0.05 ns/MHz linear; 1 ns ripple
- Frequency Sense: Non-inverting

**Synthesizer Characteristics**
- Frequency Accuracy: ±1.0 ppm max. over temp (±0.02 ppm optional)
- Frequency Step: 1.0 MHz (125 kHz steps is Option X)
- 10 MHz level (In & Out): +3 dBm, ± 3 dB, 75 ohms (Option E)

**Controls, Indicators**
- Frequency Selection: Direct readout LCD; pushbutton switches or remote selection
- Gain Selection: Direct readout LCD; pushbutton switches or remote selection
- Power: Green LED
- Alarm: Red LED
- Remote: Yellow LED; RS232C, 9600 baud (RS485 option Q),

**Other**
- RF Connector: BNC, 50Ω (female)
- IF, 10 MHz Connectors: BNC (female) - Option -E
- Alarm/ Remote Connector: DB9 - NO or NC contact closure on Alarm
- Size: 19 inch, 1RU standard chassis 1.75” high X 16.0” deep
- Power: 100 - 240 ±10% VAC, 47 - 63 Hz, 45 watts max.

**Options**
- E: External 10 MHz ref. input & output
- H: High Stability (± 0.01 ppm) internal reference
- Q: RS485 Remote Interface
- T: Temperature Sensor
- W8: Ethernet M&C Remote Interface
- W18: Ethernet Interface with SNMP
- X: 125 kHz Frequency Step Size

**Connector Options**
- See TABLE 2.2

1.3 Monitor and Control Interface

A) Remote serial interface

Protocol: RS-232C, 9600 baud rate, no parity, 8 data bits, 1 start bit, and 1 stop bit. (RS-232C, RS-422, or RS-485 - Option-Q)

<table>

B) Status Requests

Table 1.1 lists the status requests for the 2016-1327 and briefly describes them.

* PLEASE NOTE: The two character {aa}(00-31) prefix, in the table below, should be used ONLY when RS-485, (OPTION-Q), is selected.

<table>
<thead>
<tr>
<th>Command Status</th>
<th>Syntax*</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Command Status</td>
<td>{aaS1}</td>
<td>Returns {S1bbbcA} where:</td>

<tr>
<td></td>
<td></td>
<td>• bbbb = Rx frequency</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• cc = Rx gain</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• A = summary alarm; 1=alarmed, 0=normal</td>
</tr>
</tbody>
</table>

10MHz Ref Status {aaS2} Returns {S2E} where:

(option -E only) • E = 1 - external 10 MHz switched in

LNB Current {aaS3} Returns {S3eee} where:

(option -L only) • eee = LNB current (000 to 500 = 0 to .500 A)
C) Commands
Table 1.2 lists the commands for the 2016-1327 and briefly describes them. After a command is sent the 2016-1327 sends a return “>” indicating the command has been received and executed.

**General Command Format** - The general command format is \{aaCND...\}, where:

- \{ = start byte
- aa = address  **(RS-485 only - option -Q)**
- C = 1 character, either C (command) or S (status)
- N = 1 character command or status request
- D = 1 character or more of data (depends on command)
- } = stop byte

*PLEASE NOTE: The two character \{aa\}(00-31) prefix, in the table below, should be used ONLY when RS-485, (OPTION-Q), is selected.*

2.0 Installation

2.1 Mechanical

The 2016-1327 consists of one RF/Controller PCB housed in a 1 RU (1 3/4 inch high) by 16 inch deep chassis. A switching, ±12, +24, +5 VDC power supply provides power for the assemblies. The 2016-1327 can be secured to a rack using the 4 holes on the front panel. Figure 2.1 shows how the 2016-1327 is assembled.

FIGURE 2.1 2016-1327 Mechanical Assembly
2.2 Rear Panel Input/Output Signals

Figure 2.2 shows the input and output connectors on the rear panel.

2.3 Front Panel Controls and Indicators - The following are the front panel controls and indicators.

**DS3 - DOWN ALARM LED**
Red LED indicates downconverter alarm.

**DS1 - REMOTE LED**
Yellow LED indicates remote operation.

**DS6 - POWER LED**
Green LED indicates presence of DC power.

**LCD DISPLAY**
Display shows Downconverter frequency in MHz and Gain in dB

**S1 - MENU/EXECUTE BUTTON**
Press this to get into Program mode and to execute any changes.

**S2 - VERT. TOGGLE**
Vertical toggle switch that controls values in the Menu items when in program mode. Does not function in the normal display mode

**S3 - HORIZ. TOGGLE**
Horizontal toggle switch that controls which values are being adjusted. Does not function in the normal display mode

**FIGURE 2.3  2016-1327 Front Panel Controls and Indicators**
2.4 Operation

2.4.1 Installing and Operating the 2016-1327 Downconverter

1. Connect a -50 dBm to -20 dBm signal to RF IN, J2 (Figure 2.2)
2. Connect the IF OUT, J1, to the external equipment
3. Connect 100-240 ±10% VAC, 47 - 63 Hz to AC on the back panel.
4. Set the input frequency (See Section 2.5 Menu Settings).
5. Set the gain for +0.0 to +30.0 dB (See Section 2.5 Menu Settings).
6. Be sure DS6 (green, DC Power) is on and DS3 (red, Alarm) is off (Figure 2.3).
7. AC Fuse - The fuse is a 5 mm X 20 mm, 2 amp slow blow (Type T) and is inserted in the far slot in the drawer below the AC input as shown in Figure 2.4. There is a spare fuse in the near slot.
   If a fuse continues to open, the power supply is most likely defective.

![Fuse Location and Spare Fuse](image)
2.5 Menu Settings

2.5.1 Functions

This section describes operation of the front panel controls. There are three operator switches, the LCD display and alarm indicator LEDs. All functions for the equipment are controlled by these components. The functions are (see Figure 2.5):

<table>
<thead>
<tr>
<th>Power Up</th>
<th>Normal Display</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Menu 1</strong></td>
<td>Frequency in MHz</td>
</tr>
<tr>
<td><strong>Menu 2</strong></td>
<td>Gain (0 to +30)</td>
</tr>
<tr>
<td><strong>Menu 3</strong></td>
<td>Set Unit to Remote Operation</td>
</tr>
<tr>
<td><strong>Menu 4</strong></td>
<td>Select External 10 MHz Ref (option -E)</td>
</tr>
<tr>
<td><strong>Menu 5</strong></td>
<td>Select Remote (on/off)</td>
</tr>
<tr>
<td><strong>Menu 6</strong></td>
<td>Select RS-485 address (option -Q)</td>
</tr>
<tr>
<td><strong>Menu 7</strong></td>
<td>View LNB Current (option -L)</td>
</tr>
<tr>
<td><strong>Save Menu</strong></td>
<td>When go to end</td>
</tr>
</tbody>
</table>

Alarm indications appear on the LEDs (see Figure 2.3).

All program changes must start with the operation of the Menu/Execute switch and must also end with the operation of the Menu/Execute switch verified by the “Save Settings?” Menu. If this sequence is not followed, none of the changes will take effect. If programming is initiated and no operator action takes place for approximately 30 seconds (before the final press of the Menu/Execute switch) the display will revert to its previous status and you will need to start over.
2.5.2 Power On Settings

NOTE: THE LAST STATUS OF A UNIT IS RETAINED EVEN WHEN POWER IS REMOVED. WHEN POWER IS RESTORED, THE UNIT WILL RETURN TO IT'S PREVIOUS SETTINGS.

When power is first applied, the LCD display goes through three steps.

1. The LCD goes black to show all segments are functioning.
2. The software version will be displayed.

```
2016-1327E       V4.00
```

3. The present frequency and gain of the downconverter is shown.

```
F=1350
G=+10
```

The unit is now operational and ready for any changes the operator may desire.

2.5.3 Control Switches

1. **Menu/Execute** - Any change to the programming of the unit must be initiated by pressing the Menu/Execute switch and completed by pressing the Menu/Execute switch.
2. **Horizontal Switch** - This switch is mounted so its movement is horizontal and moves the cursor left or right.
3. **Vertical Switch** - This switch is mounted so its movement is vertical and has two functions:
   a. During frequency, gain changes, the vertical movement will raise or lower the number in the direction of the arrows.
   b. For other functions such Mute on/off, the vertical switch will alternately turn the function on or off regardless of the direction operated.
2.5.4 Frequency Changes

At any time during the modification process, if you have made a mistake and do not wish to save the changes you have made, do not press the Menu/Execute switch; simply do nothing for approximately 30 seconds, and the system will return to the normal operating mode or scroll to “R” and push the menu/Execute switch and select “NO” in the “SAVE SETTINGS?” window.

To change the FREQUENCY:

Operate the Menu/Execute switch until you get to the menu item you want to change see Figure 2.5 for the sequence of menu options. The following display is for changing the downconverter frequency:

\[
\text{DN F = 1350} \quad \text{R}
\]

Pressing the Up/Down switch down will toggle the display to:

\[
\text{DN F = 1450} \quad \text{R}
\]

By using the horizontal rocker switch the cursor can be moved left or right.

\[
\text{DN F = 1450} \quad \text{R}
\]

**NOTE**: CHANGES DO NOT TAKE PLACE ON FREQUENCY UNTIL YOU GO TO THE SAVE MENU AND INDICATE YOU WANT TO SAVE THE CHANGES.

When the display indicates the value desired you can push the Menu/Execute switch to get to the next item:

\[
\text{DN G = +10} \quad \text{R}
\]

OR you can scroll to “R”, push the Menu/Execute switch to get to:

\[
\text{SAVE SETTINGS? Y N}
\]

Selecting Y will save the new settings. Selecting N will revert to the previous settings. Pushing the Menu/Execute switch then takes you to this:

\[
\text{F=1450} \\
\text{G=+10}
\]

Figure 2.5 gives the menu items and how to make changes.
2.5.5 Gain Changes

When you get to this menu note that the gain changes will be made as you make them but if you do not wish to save the changes you have made, scroll to “R” and push the Menu/Execute switch and select “NO” in the “SAVE SETTINGS?” window or do not press the Menu/Execute switch; simply do nothing for approximately 30 seconds, and the system will return to the normal operating mode.

To change the DOWNCONVERTER GAIN:

Push the Menu/Execute switch to get to the gain setting (See Figure 2.5 for the sequence of menu options):

\[
G = +10 \\
R
\]

Pressing the Up/Down switch will change the gain in 1 or 10 dB steps depending on the cursor location:

\[
G = +20 \\
R
\]

By using the horizontal rocker switch the cursor can be moved left or right. Pressing the Up/Down switch will toggle the display digit selected until you have the desired gain.

\[
G = +20 \\
R
\]

NOTE: THE GAIN WILL BE CHANGED AS YOU ADJUST THE NUMBERS. HOWEVER, THE VALUE WILL NOT BE STORED UNTIL YOU INDICATE YES IN THE SAVE SETTINGS WINDOW.

When the display indicates the value desired you can push the Menu/Execute switch to get to the next item:

\[
\text{REMOTE OFF } \\
R
\]

OR you can scroll to “R” and push the Menu/Execute switch to get to:

\[
\text{SAVE SETTINGS? } \\
Y \ N
\]

Selecting Y will save the new settings. Selecting N will revert to the previous settings. Pushing the Menu/Execute switch then takes you to this:

\[
F=1450 \\
G=+20
\]

Figure 2.5 gives the menu items and how to make changes.
2.5.5 Alarm Indications

An alarm condition for will occur if any local oscillator phase lock loop (PLL) comes out of lock. The Mute LED will light if you select Mute and the Remote LED will light when you select the Remote mode.

![Figure 2.5 Menu Display and Sequence](image)
3.0 Environmental Use Information

A. **Rack-Mounting** - To mount this equipment in a rack, please refer to the installation instructions located in the user manual furnished by the manufacturer of your equipment rack.

B. **Mechanical loading** - Mounting of equipment in a rack should be such that a hazardous condition does not exist due to uneven weight distribution.

C. **Elevated operating ambient temperature** - If installed in a closed or multi-unit rack assembly, the operating ambient temperature of the rack may be greater than room ambient temperature. Therefore, consideration should be given to $T_{\text{mra}}$ (Maximum Recommended Ambient Temperature).

D. **Reduced air flow** - Installation of the equipment in a rack should be such that the amount of air flow required for safe operation of the equipment is not compromised. Additional space between unit may be required.

E. **Circuit Overloading** - Consideration should be given to the connection of the equipment to the supply circuit and the effect that overloading of circuits could have on over current protection and supply wiring. Appropriate consideration of equipment name plate rating should be used, when addressing this concern.

F. **Reliable Earthing** - Reliable earthing of rack-mounted equipment should be maintained. Particular attention should be given to supply connections other than direct connection to the Branch (use of power strips).

G. **Top Cover** - There are no serviceable parts inside the product so, the Top Cover should not be removed. If the Top Cover is removed the ground strap and associated screw MUST BE REINSTALLED prior to Top Cover screw replacement. FAILURE TO DO this may cause INGRESS and/or EGRESS emission problems.
