WARRANTY - The following warranty applies to all Cross Technologies, Inc. products.

All Cross Technologies, Inc. products are warranted against defective materials and workmanship for a period of one year after shipment to customer. Cross Technologies, Inc.’s obligation under this warranty is limited to repairing or, at Cross Technologies, Inc.’s option, replacing parts, subassemblies, or entire assemblies. Cross Technologies, Inc. shall not be liable for any special, indirect, or consequential damages. This warranty does not cover parts or equipment which have been subject to misuse, negligence, or accident by the customer during use. All shipping costs for warranty repairs will be prepaid by the customer. There are not other warranties, express or implied, except as stated herein.
1.0 General

1.1 Equipment Description
The Model 2099-1004-21L Frequency Source, Switch Inserter provides four 10MHz reference outputs from a 0.01 ppm high stability oven controlled crystal oscillator (OCXO), provides an L-Band RF A/B switch and inserts the 10MHz reference and/or +24V DC on the output of the L-Band Switch. Front panel LEDs indicate Alarm 1 or Alarm 2 (red) based on the alarm inputs, remote (yellow), and power from the two redundant power supplies (green). A Rear Panel LED indicates the presence of DC Power on the L-Band Output (J11). The reference output level is +13 dBm (max) into a 50Ω load. The unit provides an external reference input which can be used to lock the internal 10 MHz source to a high stability external frequency reference. An LCD display shows the 10MHz output level and insertion level, reference mode setting (Internal, External, Auto), Switch Mode (AUTO, REMOTE, MANUAL) and the DC Current of the inserted +24VDC. Connectors are 50Ω BNC female. A relay contact closure or open indicates when an alarm occurs. The 2099-1004-21L is mounted in a 1RU rack mountable chassis, and is powered by redundant power supplies fed by separate fused 100-240 ±10% VAC AC input connectors. An RS232/422/485 (selectable) M&C interface provides remote control of the unit.

1.2 Technical Specifications

TABLE 1.0 2099-1004-21L 10MHz Frequency Source, Switch, Inserter Specifications*

Output Characteristics
Reference outputs 4
Impedance 50Ω
Return Loss:
  Reference Outputs >18dB
  Switch Inputs/Outputs 12dB min (950-2150 MHz)
Reference Frequency 10.0000 MHz
Reference Output Level -10 dBm to +13 dBm (adjustable)
Reference Insertion Level -3 dBm to +6dBm (adjustable)
Harmonics < -30 dBc, < -40 typ.
Spurious < -75 dBc
DC Insertion +24VDC ± 2VDC @ 2.5Amp Max.

External Reference Input Characteristics
Impedance 50Ω
Return Loss > 14 dB
Level +3 dBm ± 3 dB
Frequency 10.000 MHz +/- 1 PPM

Alarm Input Characteristics
Sense (selectable) Normally High (Open) or Normally Low (Closed)
Logic Inputs TTL compatible
Input Logic Voltage -.3VDC to +5.0VDC Max.
Impedance 10KΩ pull-up to +5VDC

Oscillator Characteristics
Over Temperature ± 0.01 ppm max 0°C to 50°C
Aging ± 0.001 ppm per day
± 0.1 ppm per year
Warm Up ± 0.1 ppm, 4 minutes
± 0.01 ppm, 1 hour

D) Commands

Table 1.2 lists the commands for the 2099-1004-21L and briefly describes them. After a command is sent the 2099-1004-21L sends a return “>” indicating the command has been received and executed.

**General Command Format** - The general command format is `{aaCPx..}`, where:

- `{` = start byte
- `aa` = address (RS-485 only)
- `C` = 1 character, either C (command) or S (status)
- `P` = 1 or more characters identifying the parameter (depends on command)
- `x` = 1 or more numbers (with + or - if applicable) to set a numerical value or state `}` = stop byte
* PLEASE NOTE: The two character {aa} prefix, shown in the table below, is present ONLY when RS485 is selected.

2.0 Installation

2.1 Mechanical
The 2099-1004-21L consists of one RF PCB housed in a 1 RU (1 3/4 inch high) by 12 inch deep chassis. Redundant switching, ±12, +24, +5 VDC power supplies provides power for the assemblies. The 2099-1004-21L can be secured to a rack using the 4 holes on the front panel. Figure 2.0 shows how the 2099-1004-21L is assembled.

FIGURE 2.0  2099-1004-21L Mechanical Assembly
2.2 Front and Rear Panel Controls and Indicators - The following are the front and rear panel controls and indicators.

AC1 - POWER IN
AC input for switching power supply #1.
100-240 ±10% VAC, 47-60 Hz.

AC2 - POWER IN
AC input for switching power supply #2.
100-240 ±10% VAC, 47-60 Hz.

J13 - EXTERNAL REFERENCE INPUT (option -E)
External frequency reference input
+3 dBm ± 3 dB, BNC, female conn.

J19 - MONITOR AND CONTROL
DB9 female connector.

J20 - ETHERNET CONNECTION (option W18)
RJ45 Ethernet Connector

ALARM INPUTS
TTL levels or Contact Closures to provide alarm status of the external devices.

L-BAND SWITCH
A/B Switch controlled by the Alarm Inputs (Auto), Remotely, or Locally (Manual). BNC Female Connectors.

REFERENCE OUTPUTS
The frequency reference outputs.
-7 to +13 dBm; BNC, female connectors.

FIGURE 2.1 2099-1004-21L Rear Panel Input/Outputs

FIGURE 2.2 2099-1004-21L Front Panel Controls and Indicators

DS6 - ALARM 1 LED
Red LED indicates an alarm condition on CH1

DS3 - REMOTE LED
Yellow LED indicates remote operation.

S2 - MENU/EXECUTE BUTTON
Press this to get into Program mode and to execute any changes.

DS2 - PS1 POWER LED
Green LED indicates presence of DC power from power supply #1.

DS1 - PS2 POWER LED
Green LED indicates presence of DC power from power supply #2.

S1 - HORIZ. TOGGLE
Horizontal toggle switch that controls which values are being adjusted. Does not function in the normal display mode

S2 - VERT. TOGGLE
Vertical toggle switch that controls values in the Menu items when in program mode. Does not function in the normal display mode

LCD DISPLAY
Display shows Switch and Reference Modes, Insertion and Output Levels, Selected L-Band Switch Channel and Measured Inserted +24VDC Current.
2.4 Installation / Operation

2.4.1 Installing and Operating the 2099-1004-21L 10MHz Frequency Source

1. Connect 100-240 ±10% VAC, 47-63 Hz to AC1 and AC2 connectors (Figure 2.1).
   Be sure DS1 and DS2 LEDs (green, POWER) are on (Figure 2.2).
   Be sure DS6 (red, ALARM) is off and/or contact closure at DB9 ALARM connector, J19, to occur to insure that the unit is not in an alarm condition.

2. Set desired reference output level and inserted output level.

3. Connect J1 thru J4 (REFERENCE OUTPUTS) to desired equipment (Figure 2.1).

   **AC FUSE** - The fuse is a 5 mm X 20 mm, 2 amp slow blow (Type T) and is inserted in the far slot in the drawer below the AC input as shown in Figure 2.3. There is a spare fuse in the near slot. If a fuse continues to open, the power supply is most likely defective.

---

**FIGURE 2.4  Fuse Location and Spare Fuse**

---

2099-1004-21L Manual         Page 10            04/18/11
2.5 Menu Settings

2.5.1 Functions - This section describes operation of the front panel controls. There are three operator switches, the LCD display and alarm indicator LEDs. All functions for the equipment are controlled by these components. The functions are (see Figure 2.4):

Power Up
Normal Display

Menu 1  Switch Mode Select (Auto or Manual).
Menu 2a Initial Channel Select (CH1 or CH2) Sets the initial switch position in Auto mode. The unit will switch to the non-selected channel if the selected channel has an alarm and the non-selected channel does not have an alarm.
Menu 2b Manual Select (CH1 or CH2) Forces the Switch to CH1 or CH2 regardless of alarms or Remote Commands.
Menu 3  Reference Mode Select (Internal or External [Locked to an external source]).
Menu 4  Reference Output Level Select (-10 to +13dBm) Allows the user to set the output level on J1-J4 Rear Panel BNC connectors.
Menu 5  Reference Switch Output Insertion (On or Off). Selects whether the reference is inserted on the Switch output connector (J11).
Menu 6  Reference Insertion Level Select (-3 to +6 dBm). Allows the user to set the insertion level on the Switch output connector (J11).
Menu 7  Reference Frequency Offset (+/-2000 [Internal Only]). Allows the user to vary the internal reference frequency approximately +/- 1PPM.
Menu 8  DC Switch Insertion. Selects whether the DC voltage is inserted on the Switch output connector (J11).
Menu 9  Set Unit to Remote Operation.
Menu 10 Select Remote Interface (RS232, RS422, or RS485).
Menu 11 Set RS-485 address (RS-485 mode only).
Menu 12 Alarm Sense of External Alarm Inputs (Normally Open [+5Volts] or Normally Closed [0Volts].

Save Menu When “R” is selected from any above menu or at the end.

All program changes must start with the operation of the Menu/Execute switch and must also end with the operation of the Menu/Execute switch verified by the “SAVE SETTINGS?” Menu. If this sequence is not followed, none of the changes will take effect. No program changes will be evident until they are verified at the “SAVE SETTINGS?” Menu.
2.5.2 Power-On Settings

**NOTE:** THE LAST STATUS OF A UNIT IS RETAINED EVEN WHEN POWER IS REMOVED. WHEN POWER IS RESTORED, THE UNIT WILL RETURN TO IT'S PREVIOUS SETTINGS.

When power is first applied, the LCD display goes through three steps.
1. The LCD goes black to show all segments are functioning.
2. The software version will be displayed.

```
REV.  4.0
```

3. The selected output of the switch is displayed.

```
AUTO-E +3dBm +12dBm
Auto  CH1   OFF
```

The unit is now operational and ready for any changes the operator may desire.

2.5.3 Control Switches

**Menu/Execute** - Any change to the programming of the unit must be initiated by pressing the Menu/Execute switch and completed by pressing the Menu/Execute switch.

**Horizontal Switch** - This switch is mounted so its movement is horizontal and moves the cursor left or right.

**Vertical Switch** - This switch is mounted so its movement is vertical and will toggle settings such as ON/OFF and RS232/422/485. In the case of the LEVEL setting, the vertical switch will increase or decrease the digit that is selected (within the limits of operation).
### Power Up

| Power Up | REV 4.00 |

### Normal Display

| Normal Display | auto-e  +3dBm +12dBm REFERENCE SWITCH | push button |

| SW MODE SELECTED DC AMPS | push button |

### Menu 1 Switch Mode Select (AUTO or MANUAL)

| Menu 1 | Switch Mode Select (AUTO or MANUAL) | switch = AUTO R | scroll <> push button |

### Menu 2a Initial Channel Select (CH1 or CH2 [AUTO ONLY])

| Menu 2a | Initial Channel Select (CH1 or CH2 [AUTO ONLY]) | initial channel R select = 1 R | scroll <> push button |

### Menu 2b Manual Select (CH1 or CH2 [MANUAL ONLY])

| Menu 2b | Manual Select (CH1 or CH2 [MANUAL ONLY]) | manual select = 1 R | scroll <> push button |

### Menu 3 Reference Mode Select (Internal, External [Lock] or Auto)

| Menu 3 | Reference Mode Select (Internal, External [Lock] or Auto) | ref mode = auto R | scroll <> push button |

### Menu 4 Reference Output Level Adjust (from -10 to +13 dBm)

| Menu 4 | Reference Output Level Adjust (from -10 to +13 dBm) | reference output level = +10 R | scroll <> push button |

### Menu 5 Reference Switch Output Insertion (On or Off)

| Menu 5 | Reference Switch Output Insertion (On or Off) | reference insertion = on R | scroll <> push button |

### Menu 6 Insertion Level Adjust (from -3 to +6 dBm)

| Menu 6 | Insertion Level Adjust (from -3 to +6 dBm) | reference insert level = +03 R | scroll <> push button |

### Menu 7 Reference Frequency Offset (+/- 2000 [Internal only])

| Menu 7 | Reference Frequency Offset (+/- 2000 [Internal only]) | intern freq adjust offset = +0000 R | scroll <> push button |

### Menu 8 +VDC Switch Insertion (On or Off)

| Menu 8 | +VDC Switch Insertion (On or Off) | dc insertion = off R | scroll <> push button |

### Menu 9 Set Unit to Remote Operation

| Menu 9 | Set Unit to Remote Operation | remote = on R | scroll <> push button |

### Menu 10 Select Remote Interface

| Menu 10 | Select Remote Interface | interface = rs-232 R | scroll <> push button |

### Menu 11 Set RS-485 Address (RS-485 Mode Only)

| Menu 11 | Set RS-485 Address (RS-485 Mode Only) | rs485 address = 00 R | scroll <> push button |

### Menu 12 Alarm Input Sense (Normally Open [+5V] or Normally Closed [0V])

| Menu 12 | Alarm Input Sense (Normally Open [+5V] or Normally Closed [0V]) | alarm sense = normally open (+5V) R | scroll <> push button |

### Save? When “R” is selected from any above menu or at the end

| Save? When “R” is selected from any above menu or at the end | save settings? y n | scroll <> push button |

---

**Figure 2.4 Menu Display and Sequence**
2.6 10 MHz Reference Operation

2.6.1 AUTO Mode

When the reference mode is set to AUTO the unit will attempt to lock to a reference signal applied to the external reference input (EXT REF INPUT, J13) on the rear panel. The front panel will display AUTO-E to indicate that the unit is locked, or in the process of locking, to an external reference.

If no signal is detected on the EXT REF INPUT then the unit’s internal reference will switch to internal control and the front panel will display AUTO-I to indicate internal control. If the unit’s external reference is restored then the unit will restart the lock process and the front panel will display AUTO-E.

If the unit detects an external reference and is unable to lock to it after about 7 seconds the unit will switch to internal control (AUTO-I) and remain there until either the power is cycled, the external 10 MHz reference is removed and then reapplied, or the user goes into the REF MODE menu and toggles the reference mode and then reselects AUTO.

The external reference must be accurate to within +/- 1 ppm for the unit to be able to lock to it.

2.6.2 Internal Mode

When the unit is set to internal mode the frequency of the internal reference is controlled by the front panel Reference Frequency Offset adjustment. The frequency is adjustable to about +/- 1 ppm.

2.6.3 External Mode

When the unit is set to external mode the unit will lock to a reference signal applied to the external reference input. There is no automatic switchover to internal control when the unit is in external reference mode.

2.7 RF A/B Switch Operation

2.7.1 AUTO Mode

Auto is the normal mode for the switch. The unit will monitor the external alarm inputs and switch if the currently selected channel is alarmed and the other channel is not. The switch will always go to the channel selected in initial channel select when AUTO mode is entered as long as that channel is not alarmed.

2.7.2 Remote Mode

Remote mode may only be entered via remote M&C commands. Remote selection of switch channel position will override the AUTO mode. The remote mode is for the user to test signal continuity and switch operation from a remote location.

2.7.3 Manual Mode

Manual mode overrides both remote and auto mode. Manual mode is for the user to test signal continuity and switch operation from the front panel.
3.0 Environmental Use Information

A. Elevated operating ambient temperature - if installed in a closed or multi-unit rack assembly, the operating ambient temperature of the rack may be greater than room ambient temperature. Therefore, consideration should be given to Tmra.

B. Reduced air flow - Installation of the equipment in a rack should be such that the amount of air flow required for safe operation of the equipment is not compromised. Additional space between unit may be required.

C. Mechanical loading - Mounting of equipment in a rack should be such that a hazardous condition does not exist due to uneven weight distribution.

D. Circuit Overloading - Consideration should be given to the connection of the equipment to the supply circuit and the effect that overloading of circuits could have on over current protection and supply wiring. Appropriate consideration of equipment name plate rating should be used, when addressing this concern.

E. Reliable Earthing - Reliable earthing of rack-mounted equipment should be maintained. Particular attention should be given to supply connections other than direct connection to the Branch (use of power strips).

F. Top Cover - There are no serviceable parts inside the product so, the Top Cover should not be removed. If the Top Cover is removed the ground strap and associated screw MUST BE RE-INSTALLED prior to Top Cover screw replacement. FAILURE TO DO this may cause INGRESS and/or EGRESS emission problems.
